## **DETAILED ACTION**

### **ELECTION/RESTRICTIONS**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-45, 49 and 50, drawn to a system for detecting the value of a wager based on the weight of casino chips, classified in class 273, subclass 309.
- II. Claims 46-48, drawn to a data transfer system for a casino table, classified in class 463, subclass 40.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it may function independently as a device for automatically determining the value of a wager based upon the weight of the tokens. The subcombination has separate utility such as transferring data between remotely located processing devices.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

### **CONCLUSION**
